Eolis Air Manager: The Only Air Purifier Tested Effective Against **CORONAVIRUSES** also Won the **Best Product of the Year – Indoor Air Quality**

Eolisair's head office has carried out a test on a strain of human coronavirus (HCoV-229E) in partnership with an independent laboratory specializing in microbiology to demonstrate the effectiveness of Eolis Air Manager in eliminating coronaviruses.

Test results showed that our professional air purifier EOLIS Air Manager made it possible to **eliminate 99.6% of coronaviruses** present in the test chamber, after **only 10 minutes** of operation, thanks to our Perform + (HEPA 13) filter.

These results validated the effectiveness of our technology in removing viral load (of the coronavirus type) in the air. Eolis Air Manager is the preferred choice of professionals in the healthcare, hospitality, education, public and private sectors looking for an effective and green solution in indoor air quality treatment.

Furthermore, Eolis Air Manager won the Best Product of the Year – Indoor Air Quality award at the **2020 MENA Green Building Awards** last November 18. Organized by Emirates Green Building Council, a non-government organization that promotes and educates on sustainability practices in the built environment, the Annual Awards honors the outstanding contribution of green building and sustainability practitioners in the private and public sectors in the region.
