TEMPORARY REGULATIONS

“Safe and flexible adaptation, effectively controlling the COVID-19 pandemic”

(Attached to Resolution No. 128/NQ-CP dated on October 11, 2021 by the Government)

The World Health Organization, scientists and countries believe that the COVID-19 pandemic cannot be completely controlled before 2023; There may be new strains of the virus that are more dangerous, making the pandemic complicated and unpredictable. However, the coverage of vaccines and drugs for treatment help reduce the number of severe cases, deaths and decrease of infection rate. Therefore, many countries have changed their pandemic response strategies from trying to completely extinguish the disease to living safely with the disease.

In Vietnam, some experiences have been initially drawn from the actual practice of pandemic prevention and control; the response capacity of the health system has been gradually improved; Vaccination coverage, especially for high-risk groups and large cities is rapidly increasing helping us to be more proactive in pandemic prevention and control.

From the actual situation, analysis of scientists, experts, opinions of localities and the National Steering Committee for COVID-19 prevention and control, the Government has determined the goals of the pandemic prevention and control is still a key task in order to maximally protect the health and life of the People, restore and develop socio-economic, ensure security, social order and safety; shift the strategy of pandemic prevention and control to **"safe and flexible adaptation, and effectively controlling the COVID-19 pandemic"**.

The Government promulgates the temporary Regulation "Safe and flexible adaptation, effectively controlling the COVID-19 pandemic" (hereinafter referred to as the Regulation).

I. OBJECTIVES

To have maximum protection of people's health and lives; to minimize infected cases, severe disease transfer, and death due to COVID-19; socio-economic restoration and development, ensuring security, social order and safety; realize the dual goal of bringing the whole country to a new normal state as soon as possible, striving in 2021.

While the rate of vaccine coverage is being accelerated but has not yet reached universal coverage and drugs to treat COVID-19 are being developed and put into use, but there is no specific drug; the objectives are to ensure the uniform implementation of regulations and instructions of ministries and branches, while promoting the initiative and creativity of the locality in controlling the pandemic situation, creating conditions for the restoration of production and business. , develop socio-economic, bringing people's daily life gradually back to the new normal; do not let the local situation and each locality with different rule in the promulgation and implementation of solutions above the necessary level, leaving to negative impact on production, business, and social life.

II. OPINION

1. Ensuring dual goals but putting people's health and life first, first and foremost; solutions for pandemic prevention and control must be based on science, suitable to the country's reality and conditions; ensure that people are protected

against pandemics at the best, able to access to medical services at the earliest and fastest, right from the grassroots; but does not cause congestion for circulation and production.

2. Strengthening the leadership and direction of the Party; mobilize the whole political system; uphold the responsibilities of Party committees and authorities at all levels, the responsibility of leaders in pandemic prevention and control, realizing dual goals; ensure uniform leadership and direction throughout the country, and at the same time promote the initiative and creativity of governments at all levels, especially at the grassroots level.
3. In pandemic prevention and control, pandemic prevention must be fundamental and long-term; health care force is the core force along with the army, police, ... but must mobilize the participation of all forces and classes in society. The role of people and businesses should be promoted as the center and subject in pandemic prevention and control, in safe production, business and living.
4. Solutions of safe and flexible adaptation solutions and effective control of the COVID-19 pandemic must be implemented decisively, promptly and drastically; ensure harmony between medical professional solutions with administrative, economic and social solutions. Medical solutions must be synchronized between isolation with testing, treatment and vaccines, under the motto "isolation and testing are the key, vaccines and drugs are prerequisites".

III. CLASSIFICATION OF ASSESSMENT AND DETERMINATION OF PANDEMIC LEVEL

1. Classification of pandemic level
 - Level 1: Low risk (new normal) – green.
 - Level 2: Medium risk - yellow.
 - Level 3: High risk - orange.
 - Level 4: Very high risk - red.
2. Range of pandemic level assessment

Assessment is from the commune level. Encourage assessment is encouraged from the smallest possible scale (below the commune level) to ensure flexibility and efficiency.
3. Criteria for pandemic level assessment
 - a) Rate of new cases in the community/population/time.
 - b) Vaccine coverage (note the high-risk age group, rate of first dose injection, rate of full dose).
 - c) Capability to accept and treat at gland (note clearly specifying the capacity of receiving, existing use and treatment and additional plans).
4. Determination of pandemic level
 - a) The Ministry of Health shall guide the criteria and methods of assessment and determination of the pandemic level;
 - b) Based on the guidance of the Ministry of Health on assessment and determination of pandemic level and pandemic situation in the area, the People's Committee of the province or city directly under the central government decides to change the pandemic level. In case of upgrading the pandemic level, it is

required to notify at least 48 hours in advance to people, organizations and businesses, and prepare before it is applied.
