

## A Comprehensive Offer of Preventive Testing of Your Employees for **COVID-19**

### 1. Confirmation of virus presence – a RT-PCR test from pharyngeal and nasopharyngeal swab

#### Performance of testing

- Medirex mobile sample collection team will be sent to your company premises (if the number of employees exceeds 25).
- Testing through arranging of an appointment using the Medirex drive-through system at sample collection locations (if the number of employees is under 25).
- A special intervention by the mobile sample collection team within 24 hours of placing the order (price to be agreed).

**Price: €60 per test** (includes all costs related to testing).

- Delivery of test results: within 48 hours of delivery of the samples to the laboratory (via text message/SMS or e-mail).
  - Information about the conditions for testing (preparing of the premises, instructions for the employees, the list of employees to be tested etc.)
- **Natália Čierniková** (natalia.ciernikova@medirexgroup.sk , +421 0918 321 025).

### 2. Confirmation of the phase of the diseases and a disease that was overcome – test for antibodies from peripheral\* blood

- A) The specific phase of COVID-19 disease (testing for the level of IgA, IgM, and IgG antibodies) – aimed at testing of the acute infection phase and to confirm that the infection was overcome.

**Price: €50 per test**

- B) Overcoming of COVID-19 disease (testing for the level of IgG antibodies) – aimed at confirming that the infection was overcome.

**Price: €30 per test**

### How the testing is performed

- Collection of peripheral blood by Medirex mobile sample collection team at your company premises.
- Collection of peripheral blood at a medical office (alternatively by the physician from the Company Medical Service\*\*) under conditions agreed in advance.
- Collection of peripheral blood by arranging an appointment at [www.medirex.sk](http://www.medirex.sk) in one of the Medirex sample collection centres.
- Delivery of test results – within 24 hours of delivering the sample to the laboratory (via a text message/SMS or e-mail).
- Information about the conditions for testing (preparing of the premises, instructions for the employees, the list of employees to be tested etc.)  
– **Natália Čierniková** ([natalia.ciernikova@medirexgroup.sk](mailto:natalia.ciernikova@medirexgroup.sk) , +421 0918 321 025).

### Diagnosing of COVID-19 disease depending on the infection phase:

- **3 – 7 days** following the contact with the infection: RT-PCR method. Sample collection: pharyngeal and nasopharyngeal swab
- **7 – 15 days** following the contact with the infection:
  - Combination of testing methods using RT-PCR as well as testing for antibodies
  - Definite confirmation of the infection is always performed using the RT-PCR method on a swab-collected specimen
- **15 and more days** following the contact with the infection:
  - Testing for antibodies
  - In case of a positive test result for IgA/IgM, it is necessary to also perform RT-PCR testing on a sample obtained by a swab to confirm the infection
  - In case of a positive test result for IgG, this is a case of infection that was overcome.
