

Empowering the French Community First Aid Training with French Instructors

Frontliners Training Center

We are excited to share in the French CCI newsletter one of our activities, which focuses offering **First Aid classes** especially tailored for the French community. Our objective is to provide essential knowledge and abilities needed to react appropriately in emergency situations.

First Aid is crucial since accidents and medical crises can happen at any time. Quick and effective response times can mean the difference between life and death

Our first aid classes provide practical instruction in a variety of life-saving skills, including CPR (Cardiopulmonary Resuscitation) and the treatment of common injuries; **we are accredited by ASHI (American safety and health institute), NAEMT (National Association of Emergency Medical Technicians), DOH and ACTVET**

First Aid courses offered in the UAE are entirely in English, which can be difficult for some of the country's French-speaking residents. **The heart of our training facility is our team of highly qualified French-speaking instructors.** They have experience teaching courses in French and can explain further the course presentation that is made in English (video part). This method ensures enhanced participant comprehension and communication, allowing students to study in a comfortable environment.

Community-specific Training: At Empowering First Aid, we are aware that the demands of the French-speaking community can differ. As a result, we provide a variety of customized courses, ranging from first aid basics to more complicated ones like managing particular emergency scenarios or trauma treatment. Our goal is to offer skills that are applicable and practical so that the community can handle any unique problems that may arise.
