FREE Webinar: Emerging From COVID-19: A Ground-Zero Perspective from Washington's Life Sciences

The Seattle region was the U.S. epicenter of the COVID-19 pandemic, was first to respond, and is now a leader in the recovery. Learn how Washington's life science community partnered with public health to flatten the region's pandemic curve and how we can emerge from sheltering.

Learn Insider Perspectives from the Scientists Helping to Guide Next Steps:

- ❑ How UW Virology pioneered high through-put testing with drive-through sampling. How that testing will remain pivotal in managing COVID-19 going forward.
- ❑ How testing, contact tracing, and computational modeling will help the region emerge from the crisis.
