Retail Track

*Sustainable Retail Practices*

Scope 3 Emissions Track

*Supply Chain Emissions & EU Compliance*

E-Mobility Track

*Sustainable Transport & Good Mobility*

REGISTER HERE

Be part of the **9th edition** of the dynamic platform designed to inspire action, share best practices, and accelerate sustainable transformation across industries.

# OUR MISSIONS

**To shed light on business practitioners** who have created business value while improving their impact on people and the planet.

**To connect** with relevant potential sustainability partners and services

**To get inspired** by leading sustainable initiatives and projects in Asia.

**To empower businesses** with innovative and effective strategies driven by economic, environmental, and social performance.

## TRACK 1: Retail

### Sustainable retail practices aligned with Thai government initiatives

This track explores how retailers can integrate sustainability into their core business strategies, aligning with evolving consumer expectations and government initiatives. It **focuses on responsible sourcing, waste reduction, circular economy models, and low-carbon operations across retail value chains.**

Discussions highlight how retailers can influence both upstream suppliers and downstream consumers to reduce environmental impact while maintaining profitability and brand value.

## TRACK 2: Scope 3 Emissions

### Supply Chain Emissions & EU Compliance

This track addresses the growing importance of managing Scope 3 emissions—indirect emissions across the entire value chain, which often make up the majority of a company’s carbon footprint. It covers **strategies for measuring, reporting, and reducing supply chain emissions**, as well as navigating **evolving regulatory requirements** such as EU sustainability and disclosure frameworks.

Emphasis is placed on supplier engagement, data transparency, and cross-value-chain collaboration to achieve net-zero targets.

## TRACK 3: E-Mobility

### Sustainable Transport & Good Mobility

This track focuses on the **transition to sustainable transport systems** through **electrification, smart mobility solutions, and low-carbon logistics**. It highlights innovations in electric vehicles, infrastructure, and urban mobility that reduce emissions and improve efficiency.

The sessions explore how businesses can adopt cleaner transportation models, optimize logistics, and contribute to more sustainable and livable cities.

# Sustainability for Business Forum 2026 Program
