Schneider
Electric

 **VEOLIA**

ONE BANGKOK
The Heart of Bangkok

Mission & Objectives

- To increase one's understanding of key sustainability and climate change issues
- To share practical approaches for how French companies (or FTCC members) are leveraging new opportunities for growth, performance, and competitiveness that also delivers positive environmental and social outcomes;
- To be part of a forum convening Thai and French companies to advance the dialogue, collective action and business opportunities around sustainability and the circular economy
- To be inspired by sustainability leaders
- To network and be part of the sustainability and social ecosystem
- To promote diversity and inclusion in the workplace

Life Is On

Schneider Electric Innovation Hub

At Schneider Electric, sustainability is at the core of our innovation. Our Innovation Hub is dedicated to developing innovative solutions that drive energy efficiency, reduce carbon footprints, and promote circularity. Central to our approach is the EcoStruxure model, an open, interoperable, IoT-enabled system architecture and platform that enhances energy management and automation across various sectors.

We are committed to creating a sustainable future through smart technology and innovative practices that empower businesses and communities worldwide.

Advanced Wastewater Management System at One Bangkok

We are pleased to invite you to visit the state-of-the-art wastewater management system at *One Bangkok*, one of Southeast Asia's largest integrated mixed-use commercial developments located in the heart of Bangkok.

During this visit, you will gain valuable insights into:

- Advanced wastewater management operations
- Environmental management systems
- Cutting-edge technologies implemented by Veolia Water Technologies, a global leader in wastewater treatment solutions, who designed, constructed, and currently manages the facility

The tour will also showcase One Bangkok's modern building management practices under the joint operation of Fraser Property and TCC Assets.

This visit offers a unique opportunity to witness firsthand how sustainable water management practices are implemented in a world-class commercial development, combining innovative technology with environmental responsibility.

The facility demonstrates excellence in:

- Sustainable water management
- Environmental stewardship
- Smart building technologies for a Large scale building
- Resource efficiency
